XX
CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

X
S   Disclosure; Page 51; 106pp; English.
X
C   The present invention discloses new feline interleukin 18 (IL-18), feline
C   caspase-1, feline IL-12 single chain and canine IL-12 single chain
C   proteins. A composition comprising a feline IL-18, feline caspase-1,
C   feline IL-12 single chain or canine IL-12 single chain proteins, a
C   nucleic acid encoding these proteins, mimetopes of these proteins,
C   multimeric forms of these proteins, an antibody against these proteins,
C   or an inhibitor identified by its ability to inhibit the activity of
C   these proteins, can be used to treat or prevent autoimmune diseases,
C   allergic reactions, infectious diseases, tumour development, inflammatory
C   diseases and/or graft rejection in animals. The present nucleic acid
C   sequence represents a feline interleukin 12 DNA sequence, as described in
C   the invention

CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Claim 24; SEQ ID NO 43; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline single chain IL-12 protein encoding cDNA.

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Claim 24; SEQ ID NO 38; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline single chain IL-12 protein encoding cDNA.

PT   Novel feline cytokine protein - useful for treating feline auto:immune
PT   diseases, e.g. those caused by feline herpes virus or feline calcivirus.
XX
PS   Claim 21; Page 56-57; 94pp; Japanese.
XX
CC   This sequence encodes a novel feline cytokine mature protein, FLAFp40.
CC   This protein can be used in the production of a FLAFp35/FLAFp40
CC   heterodimer which can potentiate the cytotoxic activity of feline
CC   cytotoxic T lymphocyte cells. Such proteins are used for treatment of
CC   feline autoimmune diseases e.g. as caused by feline herpes virus or
CC   feline calcivirus

X
S   Claim 20; Page 55; 94pp; Japanese.
X
C   This sequence encodes a novel feline cytokine mature protein, FLAFp40.
C   This protein can be used in the production of a FLAFp35/FLAFp40
C   heterodimer which can potentiate the cytotoxic activity of feline
C   cytotoxic T lymphocyte cells. Such proteins are used for treatment of
C   feline autoimmune diseases e.g. as caused by feline herpes virus or
C   feline calcivirus

:X
:C   The present invention discloses new feline interleukin 18 (IL-18), feline
:C   caspase-1, feline IL-12 single chain and canine IL-12 single chain
:C   proteins. A composition comprising a feline IL-18, feline caspase-1,
:C   feline IL-12 single chain or canine IL-12 single chain proteins, a
:C   nucleic acid encoding these proteins, mimetopes of these proteins,
:C   multimeric forms of these proteins, an antibody against these proteins,
:C   or an inhibitor identified by its ability to inhibit the activity of
:C   these proteins, can be used to treat or prevent autoimmune diseases,
:C   allergic reactions, infectious diseases, tumour development, inflammatory
:C   diseases and/or graft rejection in animals. The present nucleic acid
:C   sequence represents a feline interleukin 12 DNA sequence, as described in
:C   the invention

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Claim 23; SEQ ID NO 29; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline single chain IL-12p40 subunit protein
CC   encoding full-length cDNA.

PT   Vaccine for treating or preventing lentivirus infection in cats, contains
PT   nucleic acid sequence encoding viral protein under control of eukaryotic
PT   promoter.
X
PS   Claim 14; Page 36; 37pp; German.
X
CC   This invention describes a novel vaccine (A) for prevention or treatment
CC   of lentivirus infection in felines which comprises an immunizing nucleic
CC   acid sequence (I) that contains, or comprises, at least part of a gene
CC   encoding a protein (II) of the virus, under control of a eukaryotic
CC   promoter functional in the relevant animal. (II) is especially the
CC   envelope (env) protein. The invention also describes (1) vaccine (A)
CC   containing an immunizing protein, or fragment, from a lentivirus plus at
CC   least one of interleukin (IL)-12 and/or -16; and (2) preparation of a
CC   lentivirus protein, or fragment, especially derived from feline immune
CC   deficiency virus (FIV), by expressing the corresponding nucleic acid
CC   sequence in a host cell. The products of the invention have antiviral
CC   activity. The vaccine (A) and related protein-based vaccines, are
CC   particularly used to treat or prevent lentivirus infections in domestic
CC   cats, especially feline immune deficiency virus (FIV). Vaccination with
CC   (A) allows differentiation between vaccinated and infected animals, from
CC   the antibody status. The vaccines may be formulated with an adjuvant
CC   (particularly interleukin-12 and/or IL-16) that elicits a cytotoxic
CC   immune response, particularly a Th1 response

PT   Recombinant feline interleukin-12, useful as immunostimulant and for
PT   treating e.g. viral infections in cats, and related nucleic acid
PT   constructs.
XX
PS   Claim 3; Page 30; 35pp; German.
XX
CC   This invention describes a novel feline interleukin-12 (fIL-12)
CC   polypeptide (I) that is expressed, by recombinant gene expression in
CC   eukaryotic or prokaryotic cells, in the form of both polypeptide chains
CC   of subunits p35 and p40. These proteins are formed so that, in equimolar
CC   concentrations and in presence of an immunizing antigen, they can be
CC   administered to carnivores, particularly domestic cats. The invention
CC   also describes a nucleic acid construct (II) encoding fIL-12 containing
CC   sequences at least 95% identical with the p40- and p35-encoding sequences
CC   (A, 990 bp and B, 669 bp respectively), reproduced in the specification,
CC   as immunostimulants for immunization against infectious diseases and/or
CC   for treating infections or tumors in felines, especially domestic cats.
CC   The products of the invention have immunostimulatory, antiviral and
CC   antitumor activity. Nucleic acid constructs that encode (II) are useful
CC   as adjuvants for prophylactic immunization against viral diseases and for
CC   treating diseases associated with a Th1 defect. IL-12 induces synthesis
CC   of interferon gamma (Th1 response). The feline interleukin-12 polypeptide
CC   is useful for carnivores, and particularly domestic cats in the
CC   following: (i) as immunostimulant, for preventative or therapeutic use;
CC   and (ii) treating tumors and autoimmune diseases, or diseases associated
CC   with a Th1 defect, especially pre-existing infections by feline immune
CC   deficiency virus (FIV), feline leukemia virus and corona virus

```

```
CC   This sequence encodes a novel feline cytokine protein, FLAFp40. This
CC   protein can be used in the production of a FLAFp35/FLAFp40 heterodimer
CC   which can potentiate the cytotoxic activity of feline cytotoxic T
CC   lymphocyte cells. Such proteins are used for treatment of feline
CC   autoimmune diseases e.g. as caused by feline herpes virus or feline
CC   calcivirus

:X
:C   This invention describes a novel vaccine (A) for prevention or treatment
:C   of lentivirus infection in felines which comprises an immunizing nucleic
:C   acid sequence (I) that contains, or comprises, at least part of a gene
:C   encoding a protein (II) of the virus, under control of a eukaryotic
:C   promoter functional in the relevant animal. (II) is especially the
:C   envelope (env) protein. The invention also describes (1) vaccine (A)
:C   containing an immunizing protein, or fragment, from a lentivirus plus at
:C   least one of interleukin (IL)-12 and/or -16; and (2) preparation of a
:C   lentivirus protein, or fragment, especially derived from feline immune
:C   deficiency virus (FIV), by expressing the corresponding nucleic acid
:C   sequence in a host cell. The products of the invention have antiviral
:C   activity. The vaccine (A) and related protein-based vaccines, are
:C   particularly used to treat or prevent lentivirus infections in domestic
:C   cats, especially feline immune deficiency virus (FIV). Vaccination with
:C   (A) allows differentiation between vaccinated and infected animals, from
:C   the antibody status. The vaccines may be formulated with an adjuvant
:C   (particularly interleukin-12 and/or IL-16) that elicits a cytotoxic
:C   immune response, particularly a Th1 response

X
C   This invention describes a novel feline interleukin-12 (fIL-12)
C   polypeptide (I) that is expressed, by recombinant gene expression in
C   eukaryotic or prokaryotic cells, in the form of both polypeptide chains
C   of subunits p35 and p40. These proteins are formed so that, in equimolar
C   concentrations and in presence of an immunizing antigen, they can be
C   administered to carnivores, particularly domestic cats. The invention
C   also describes a nucleic acid construct (II) encoding fIL-12 containing
C   sequences at least 95% identical with the p40- and p35-encoding sequences
C   (A, 990 bp and B, 669 bp respectively), reproduced in the specification,
C   as immunostimulants for immunization against infectious diseases and/or
C   for treating infections or tumors in felines, especially domestic cats.
C   The products of the invention have immunostimulatory, antiviral and
C   antitumor activity. Nucleic acid constructs that encode (II) are useful
C   as adjuvants for prophylactic immunization against viral diseases and for
C   treating diseases associated with a Th1 defect. IL-12 induces synthesis
C   of interferon gamma (Th1 response). The feline interleukin-12 polypeptide
C   is useful for carnivores, and particularly domestic cats in the
C   following: (i) as immunostimulant, for preventative or therapeutic use;
C   and (ii) treating tumors and autoimmune diseases, or diseases associated
C   with a Th1 defect, especially pre-existing infections by feline immune
C   deficiency virus (FIV), feline leukemia virus and corona virus

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Claim 24; SEQ ID NO 55; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline N-terminal single chain IL-12p40 protein

PT   Nucleic acids encoding modified cytokine polypeptides (i.e. modified p40
PT   and p35 polypeptides), useful for treating various diseases e.g. diabetic
PT   retinopathy and cancer.
XX
PS   Claim 1; Page 137-138; 223pp; English.
XX
CC   The invention relates to nucleic acids encoding modified cytokine
CC   polypeptides (i.e. modified p40 and p35 polypeptides). The modified
CC   cytokine polypeptides have T-cell proliferative and interferon (IFN)-
CC   gamma induction activities. The polypeptides and polynucleotides of the
CC   invention are useful for treating various diseases e.g. bacterial
CC   infections, AIDS, diabetic retinopathy and cancer. The polypeptide and
CC   polynucleotide may also be useful as a vaccine adjuvant, to enhance a
CC   vaccinated host's cell-mediated immunity for protective response to a
CC   pathogen. The present sequence is a modified human p40 protein encoding
CC   DNA

XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the canine single chain IL-12p40 subunit reverse
CC   complementary DNA.

T   New nucleic acid molecule comprising a sequence encoding a feline p35 or
T   p40 subunit protein and a nucleic acid linker, useful in preparing a
T   vaccine against infectious diseases in feline animals.
X
S   Example 4; SEQ ID NO 52; 103pp; English.
X
C   The present invention relates to the feline interleukin (IL)-12p35 or p40
C   subunit protein and their encoding nucleic acid molecules and a nucleic
C   acid linker. The invention also provides the feline caspase (casp)-1,
C   feline IL-18 single chain and canine IL-12 single chain proteins and
C   their nucleic acid molecules. The nucleic acid molecule is useful in
C   preparing a vaccine against infectious diseases in feline animals. The
C   present sequence is the canine single chain IL-12p40 subunit protein
C   encoding cDNA.

PT   Canine cytokine protein which activates canine cytotoxic T lymphocytes -
PT   is useful for treatment of viral and autoimmune diseases in dogs.
XX
PS   Claim 8; Page 32; 51pp; Japanese.
XX
CC   This sequence encodes the canine lymphocyte activation factor (CLAF) of
CC   the invention. CLAF activates lymphocytes, especially canine cytotoxic T
CC   cells. The protein contains a p35 and a p40 subunit. CLAF or antibodies
CC   recognising it may be used in the treatment of viral diseases in dogs
CC   (such as canine distemper, canine parvovirus and canine infectious
CC   hepatitis). The antibodies may also be used in isolation of CLAF from
CC   culture of the transformant host cells by affinity chromatography. The
CC   p40 homodimer can be used for the treatment of autoimmune diseases in
CC   dogs

PT   Canine interleukin 12 - comprises P40 and P35 subunits; useful in
PT   veterinary medicine, e.g. antitumour, antivirus and vaccine adjuvant
PT   activities are expected.
XX
PS   Claim 10; Page 10-11; 12pp; Japanese.
XX
CC   The present sequence encodes a canine interleukin-12 (IL-12) P40 subunit.
CC   A canine IL-12 comprising a P40 and P35 subunit is capable of inducing an
CC   antiviral activating factor and the expression of class II MHC molecules
CC   in canine tumour cells, stimulating proliferation of canine blastogenic
CC   lymphocytes and activating canine leukocytes to inhibit canine tumour
CC   cells. The canine IL-12 can be used in veterinary medicines, e.g.
CC   antitumour, antivirus and vaccine adjuvant activities are expected

PT  Preparation of a highly pure protein, interleukin 12, a protein
PT  inhibiting the activity of interleukin 12, and a treating agent and a
PT  treating method for immunopathy of mammalian.
XX
PS  Claim 6; Page 16-17; 21pp; Japanese.
XX
CC  The present invention relates to a method for the preparation of a highly
CC  pure protein in which interleukin 12 (IL12) and/or a protein inhibiting
CC  the activity of IL12 is contacted to an ion exchanging carrier and/or a
CC  pigment carrier to get IL12 and/or a protein inhibiting the activity of
CC  IL12. The protein is used as a preventive agent for dog immunopathy. The
CC  present sequence was used in the method of the present invention

PT   Large scale production of interleukin-12 for pharmaceutical applications,
PT   comprises infecting an insect cell with a recombinant virus containing
PT   gene encoding IL-12, and producing IL-12 by carrying out spinner culture
PT   of insect cell.
CX
PS   Example; SEQ ID NO 3; 8pp; Japanese.
CX
CC   The invention related to the large scale production of interleukin-12 (IL
CC   -12), which involves infecting an insect cell with a recombinant virus
CC   containing a gene encoding IL-12, and producing IL-12 by carrying out
CC   spinner culture of insect cell. The method is useful for producing IL-12,
CC   preferably canine IL-12. IL-12 has pharmaceutical applications. The
CC   present sequence encodes canine IL-12 P40, which is used in the
CC   exemplification of the present invention.

PT   Novel gene vector for expression in insect useful for expression of
PT   foreign gene such as dog interleukin 12 gene, comprises two promoters.
XX
PS   Claim 4; SEQ ID NO 5; 13pp; Japanese.
XX
CC   The invention relates to a novel gene vector for expression in an insect
CC   comprising at least two promoters, particularly the polyhedrin promoter
CC   and p10 promoter. The vector contains at least two types of foreign
CC   protein expression gene and the gene product of the vector is produced
CC   using a gene recombinant baculovirus, particularly a recombinant silkworm
CC   nuclear polyhedrosis virus. The baculovirus is proliferated in a
CC   silkworm. The vector of the invention may be useful for expression of a
CC   foreign gene, such as canine interleukin 12. Within the vector, two types
CC   of foreign protein expression genes are integrated simultaneously for
CC   their simultaneous expression. The current sequence is that of the canine
CC   interleukin-12 (IL-12) p40 DNA of the invention.

XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the canine single chain IL-12 protein encoding cDNA.

PT   Canine cytokine protein which activates canine cytotoxic T lymphocytes -
PT   is useful for treatment of viral and autoimmune diseases in dogs.
XX
PS   Claim 8; Page 30-31; 51pp; Japanese.
XX
CC   This sequence encodes the canine lymphocyte activation factor (CLAF) of
CC   the invention. CLAF activates lymphocytes, especially canine cytotoxic T
CC   cells. The protein contains a p35 and a p40 subunit. CLAF or antibodies
CC   recognising it may be used in the treatment of viral diseases in dogs
CC   (such as canine distemper, canine parvovirus and canine infectious
CC   hepatitis). The antibodies may also be used in isolation of CLAF from
CC   culture of the transformant host cells by affinity chromatography. The
CC   p40 homodimer can be used for the treatment of autoimmune diseases in
CC   dogs

CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a canine interleukin 12 DNA sequence, as described in
CC   the invention

T   Nucleic acids encoding modified cytokine polypeptides (i.e. modified p40
T   and p35 polypeptides), useful for treating various diseases e.g. diabetic
T   retinopathy and cancer.
X
S   Claim 1; Page 137; 223pp; English.
X
C   The invention relates to nucleic acids encoding modified cytokine
C   polypeptides (i.e. modified p40 and p35 polypeptides). The modified
C   cytokine polypeptides have T-cell proliferative and interferon (IFN)-
C   gamma induction activities. The polypeptides and polynucleotides of the
C   invention are useful for treating various diseases e.g. bacterial
C   infections, AIDS, diabetic retinopathy and cancer. The polypeptide and
C   polynucleotide may also be useful as a vaccine adjuvant, to enhance a
C   vaccinated host's cell-mediated immunity for protective response to a
C   pathogen. The present sequence is a modified human p40 protein encoding
C   DNA

PT   Novel protein comprising cytotoxic lymphocyte maturation factor in
PT   substantially pure form or protein which exhibits cytotoxic lymphocyte
PT   maturation factor activity, useful as antitumor and immunoenhancing
PT   agent.
XX
PS   Claim 17; Page 28-29; 74pp; English.
XX
CC   The invention relates to a protein which comprises a cytotoxic lymphocyte
CC   maturation factor (CLMF). The protein is useful for stimulating activated
CC   T-cells which involves treating T-cells with the protein. The method
CC   further involves treating the activated T-cells with IL2 or its
CC   biologically active fragment. The protein is useful for stimulating
CC   natural killer cells which involves treating the natural killer cells
CC   with the protein. The protein has immunoenhancing and antitumour effects
CC   when used as single therapeutic agent in vivo. The present sequence is
CC   used in the exemplification of the present invention.

C   AAQ97484 and AAQ97485 are from human lymphoblast cell line RMPI 8866. IL-
C   12 is a heterodimeric cytokine which was originally identified as a
C   factor which induces gamma-interferon from T cells and natural killer
C   cells as set forth in PCT/US91/06332, published April 2 1992, and
C   incorporated by reference. EP 433827, published June 26 1991, disclosed
C   IL-12 as a cytotoxin lymphocyte maturation factor. In the patent, IL-12
C   is defined as a heterodimeric glycoprotein comprised of two covalently
C   linked subunits having mol. wts of about 40 kD and 35 kD. The two
C   subunits may be disulfide-bonded. IL-12 is administered to prevent or
C   ameliorate GVHD. Dosage is 1 ng-0.1 mg (esp. 1.0 ng-1 microg)/kg daily
C   for 3 days, the first dose given 1 hr. after transplant. IL-12 can be
C   used as the native heterodimer or as subunits. (Updated on 25-MAR-2003 to
C   correct PN field.)

PT   Nucleic acids encoding modified cytokine polypeptides (i.e. modified p40
PT   and p35 polypeptides), useful for treating various diseases e.g. diabetic
PT   retinopathy and cancer.
XX
PS   Claim 5; Page 142; 223pp; English.
XX
CC   The invention relates to nucleic acids encoding modified cytokine
CC   polypeptides (i.e. modified p40 and p35 polypeptides). The modified
CC   cytokine polypeptides have T-cell proliferative and interferon (IFN)-
CC   gamma induction activities. The polypeptides and polynucleotides of the
CC   invention are useful for treating various diseases e.g. bacterial
CC   infections, AIDS, diabetic retinopathy and cancer. The polypeptide and
CC   polynucleotide may also be useful as a vaccine adjuvant, to enhance a
CC   vaccinated host's cell-mediated immunity for protective response to a
CC   pathogen. The present sequence is human p40 protein encoding DNA

PT Novel anti-tumor agent comprising interleukin-23 gene, or cell transduced
PT with interleukin-23 gene, as active ingredient, useful for activating
PT anti-tumor immune response and treating tumor.
XX
PS Disclosure; SEQ ID NO 2; 23pp; Japanese.
XX
CC The invention relates to a novel anti-tumour agent comprising an
CC interleukin-23 (IL-23) gene, or a cell transduced with an IL-23 gene, as
CC an active ingredient. The molecules of the invention demonstrate
CC cytostatic and immunostimulant activities and may be useful within an
CC anti-tumour agent which activates an anti-tumour immune response. The
CC agent is safe when used in cancer treatment, may be combined with other
CC treatments and induces tumour-specific acquired immunity. The current
CC sequence is that of the human interleukin-23 (IL-23) p40 subunit DNA of
CC the invention.

T   psychoneuroendocrinimmune (PNI) activity, useful in diagnosing a
T   condition associated with PNI activity, e.g., inflammatory or infectious
T   diseases.
X
S   Claim 1; SEQ ID NO 381; 254pp; English.
X
C   The invention relates to a new microarray which comprises probes for
C   genes involved in psychoneuroendocrinimmune (PNI) activity. The
C   microarray is useful in diagnosing a condition associated with PNI
C   activity, such as CFS, type-2 diabetes, allergic condition, inflammation,
C   cancer and infection. The present sequence represents a
C   psychoneuroendocrinimmune gene expressed sequence tag. Note the
C   specificatio mentions SEQ ID NO of up to 3314 but only sequences up to
C   SEQ ID NO 1829 are provided.

PT   Pharmaceutical formulation for inhibiting immune response generated by
PT   interleukin-23 (IL-23) and treating e.g. autoimmune diseases, comprises
PT   p40 molecules or gene encoding p40 molecules.
XX
PS   Claim 3; SEQ ID NO 1; 12pp; Japanese.
XX
CC   This invention relates to a novel pharmaceutical formulation used for
CC   inhibiting the immune response generated by interleukin-23 (IL-23).
CC   Specifically, it refers to a formulation comprising the p40 protein or
CC   the gene encoding this protein thereof. The present invention describes
CC   the p40 gene contained in the form of a viral or non-viral vector that is
CC   capable of expressing and secreting the p40 protein. This vector can be
CC   introduced into a cell such that it can in turn inhibit the immune
CC   response generated by the production of IL-23. Accordingly, this method
CC   is useful for suppressing organ transplant rejection or treating
CC   immunological disorders associated with abnormal immune response with
CC   regard to IL-23. Furthermore, it can be used to treat autoimmune diseases
CC   and allergy. As such, compositions exhibit immunosuppressive and
CC   antiallergic activities. This polynucleotide sequence is the human p40
CC   gene of the invention.

PT   Novel compound comprising target specific portion having monoclonal
PT   antibody having specificity for oncofetal fibronectin and effector
PT   portion having interleukin-12, useful for treating cancer e.g.
PT   glioblastoma.
XX
PS   Claim 36; SEQ ID NO 10; 83pp; English.
XX
CC   The invention provides a compound comprising a target specific portion
CC   and an effector portion, in which the target specific portion comprises
CC   or consists of a monoclonal antibody having specificity for oncofetal
CC   fibronectin, or its fragment or variant which retains the antigen binding
CC   specificity of the parent monoclonal antibody, and the effector portion
CC   comprises or consists of interleukin-12, or its functional fragment or
CC   variant. The monoclonal antibody binds to a region of oncofetal
CC   fibronectin other than the extra-domain B region. Preferably, the
CC   compound comprises a target specific portion that is capable of binding
CC   to an amino acid sequence present in fibronectin expressed in both fetal
CC   and normal adult tissue, especially the repeat 7 domain of fibronectin,
CC   and is preferably specific for human oncofetal fibronectin. The
CC   monoclonal antibody is preferably a BC1 antibody. The invention also
CC   provides nucleic acids encoding the compounds of the invention and
CC   methods of their use in the production of these compounds, as well as
CC   methods of using the compounds in medicine, especially for the treatment
CC   of cancer in a patient, where the patient is a mammal, preferably a
CC   human, and the patient has a solid tumor. The cancer is a glioblastoma
CC   (claimed) or ovarian, gastric, colorectal or pancreatic cancer. The
CC   present sequence is the coding sequence of the p40 domain of human
CC   interleukin-12. In a claimed compound, the effector portion consists of a
CC   single chain interleukin-12 comprising or consisting of an interleukin-12
CC   p40 domain conjugated to the interleukin-12 and p35 domain AEB48815 via a
CC   disulfide bond. A further claimed compound comprises the p40 sequence
CC   linked by disulfide bond to a fusion protein AEB48818 comprising the BC1
CC   heavy chain fused to human interleukin-12 p35.

XX
```

```
C   The invention relates to mutant interleukin (IL)-12p40 subunit genes
C   which produces highly active human or mouse IL-12p40 sequence. IL-12p40
C   DNA is useful for DNA immunisation or gene therapy for treating diseases
C   such as cancer, AIDS, hepatitis C, hepatitis B or influenza, malaria or
C   tuberculosis, as an therapeutic or prophylactic adjuvant. IL-12p40 DNA
C   induces immune response by increasing the hydrolysis activity of
C   cytotoxic T lymphocytes when IL-12p40 subunit gene is injected with the
C   DNA vaccine, or increasing secretion of interferon (IFN)-gamma from T
C   helper cells or CD8+ T cells when IL-12p40 subunit gene is injected with
C   DNA vaccine. IL-12p40 DNA is useful in gene therapy and as a DNA vaccine.
C   The present sequence is a DNA encoding human Interleukin (IL)-12p40
C   subunit protein

PS  Example 27; Fig 33; 232pp; English.
XX
CC  The sequences given in AAQ67879-80 are expression cassettes which contain
CC  the p40 and p35 subunits of human interleukin-12 (IL-12) under the
CC  control of the entomopox virus (EPV) promoter and the vaccinia E3L
CC  promoter, respectively. These sequences were used in the construction of
CC  an ALVAC-based recombinant virus containing the genes for the two
CC  subunits of human IL-12. The p40 subunit was amplified using primers
CC  JP202 and JP189 and placed under the control of the entomopox virus (EPV)
CC  42 kD promoter in plasmid PBSHIL12p40II. The p35 subunit was amplified
CC  using primers JP186 and JP201 and placed under the control of the
CC  vaccinia E3L promoter using primers JP218 and JP220. The expression
CC  cassette was isolated and ligated with pBSSK+ generating plasmid
CC  PBSHIL12p35II. The p35 and p40 expression cassettes were excised and
CC  assembled in pBSSK+ to give PBSHIL12 in which the two expression
CC  cassettes are orientated head-to-head relative to each other. The
CC  combination casette containing the poxvirus promoted genes for both IL-12
CC  subunits was excised from PBSHIL12 and cloned in to ALVAC C6 vector
CC  plasmid pC6L to give pC6HIL12. Recombination between this donor plasmid
CC  and ALVAC rescuing virus produced recombinant virus ALVAC+IL12, which
CC  contains both the human IL-12 genes in the C6 locus. The resulting virus
CC  may be used in a composition for inducing an antigenic or immunological
CC  response, ie. for immunisation against pathogens. (Updated on 25-MAR-2003
CC  to correct PN field.)

:X
:C   The present invention describes a recombinant poxvirus (I), comprising
:C   exogenous DNA encoding an antigenic determinant of a pathogen which is
:C   then expressed in vivo in infected host cells after administration to a
:C   patient and therefore induces an immunological response. (I) may be used
:C   to vaccinate patients against a wide range of diseases and disorders
:C   depending on the type of antigen encoded by the exogenous DNA. (I) may be
:C   used to vaccinate against diseases such as rabies, influenza and
:C   Newcastle Disease. It is particularly useful for immunising against
:C   cancers. The poxvirus (I) also provides a means of manipulating
:C   lymphocytes and tumour cells for use in cell-based immunotherapeutic
:C   modalities for cancer. (I) also have enhanced safety compared to
:C   unattenuated viruses (attenuation reduces the virulence of the viruses)
:C   and known recombinant poxvirus vaccines. This increased level of safety
:C   reduces the possibility of a 'runaway' infection in the host and reduces
:C   the chance of transmission from vaccinated to unvaccinated individuals
:C   and contamination of the environment. The present sequence represents a
:C   EPV 42 kDa/human IL-12 P40 expression cassette used in the
:C   exemplification of the present invention

PT   New recombinant poxvirus which is an attenuated avipox Virus that
PT   expresses an exogenous DNA encoding carcinoembryonic antigen and an
PT   exogenous DNA encoding B7 protein, useful for cancer therapy.
XX
PS   Example 27; SEQ ID NO 194; 181pp; English.
XX
CC   The invention describes a recombinant poxvirus containing exogenous DNA
CC   in a nonessential region of the poxvirus, where the poxvirus is an
CC   attenuated avipox Virus that expresses an exogenous DNA encoding
CC   carcinoembryonic antigen and an exogenous DNA encoding B7 protein. Also
CC   described are: a composition comprising a poxvirus above in admixture
CC   with a carrier; and expressing carcinoembryonic antigen and B7 protein in
CC   vivo comprising administering to a mammal the composition above.
CC   Disclosed are: making recombinant poxvirus defined above; recombinant
CC   poxvirus vaccine having an increased level of safety compared to known
CC   recombinant poxvirus vaccines; and a modified vector for expressing a
CC   gene product in a host. The recombinant poxvirus is useful for providing
CC   a recombinant poxvirus vaccine having an increased level of safety
CC   compared to known recombinant poxvirus vaccines. The recombinant poxvirus
CC   is useful for cancer therapy. This sequence represents a human IL-12
CC   expression cassette used in the creation of NYVAC rescue virus and
CC   canarypox virus vector ALVAC comprising the human IL-12 gene.

C   The present invention relates to an expression vector comprising DNA
C   encoding a subunit of a dimeric form of interleukin under transcriptional
C   control of an ecdysone-inducible promoter. The expression vector is
C   useful in preparing a composition for treating a disease having a
C   pathogenesis which includes endogenous production of cytokine IL-12, IL-
C   23 or IL-27, e.g., infectious diseases, bacterial, protozoal or virus-
C   induced inflammation, epithelial airway inflammation such as asthma,
C   allergic disease, or autoimmune disease such as multiple sclerosis or
C   inflammatory bowel disease. The present sequence is the coding sequence
C   of the human interleukin-12 beta chain used in the exemplification of the
C   invention.

PT   Antibodies to cytotoxic lymphocyte maturation factor protein - useful as
PT   affinity ligands, assay reagents and medicaments.
XX
PS   Disclosure; Fig 25; 80pp; English.
XX
CC   The present DNA sequence encodes the 40 kDa subunit of cytotoxic
CC   lymphocyte maturation factor (CLMF) protein. The natural CLMF protein is
CC   a 75 kDa heterodimer, where the 2 subunits (see AAT77850 for the 35 kDa
CC   subunit) are bonded together via one or more disulphide bonds. CLMF
CC   protein is produced by a human B lyphoblastoid cell line. CLMF
CC   synergistically induces, in the presence of interleukin-2, the cytolytic
CC   activity of lymphokine activated killer cells. CLMF is also capable of
CC   stimulating T-cell growth. A novel antibody directed against an epitope
CC   of CLMF protein (see AAW24237 for epitope) is capable of neutralising
CC   and/or inhibiting CLMF bioactivity. This antibody may be used as an
CC   affinity ligand for purifying the CLMF protein. The antibody can also be
CC   used as an assay reagent for detecting the CLMF protein, and as a
CC   medicament for selectively blocking the proliferation and activation of
CC   cytotoxic T cells, e.g. in transplantation. (Updated on 25-MAR-2003 to
CC   correct PF field.) (Updated on 25-MAR-2003 to correct PR field.)

T   Sub-unit of cytotoxic lymphocyte maturation factor protein - useful for
T   producing CLMF protein and as an antitumour agent.
X
S   Disclosure; Fig 25; 83pp; English.
X
C   The present DNA sequence encodes a novel 40 kDa subunit of cytotoxic
C   lymphocyte maturation factor (CLMF) protein. The natural CLMF protein is
C   a 75 kDa heterodimer, where the 2 subunits (see AAV00402 for the 35 kDa
C   subunit) are bonded together via one or more disulphide bonds. CLMF
C   protein is produced by a human B lyphoblastoid cell line. CLMF
C   synergistically induces, in the presence of interleukin-2, the cytolytic
C   activity of lymphokine activated killer cells. CLMF is also capable of
C   stimulating T-cell growth. The subunits may be used for preparing the
C   CLMF protein and for preparing medicants for antitumour therapy. (Updated

PT   Novel protein comprising cytotoxic lymphocyte maturation factor in
PT   substantially pure form or protein which exhibits cytotoxic lymphocyte
PT   maturation factor activity, useful as antitumor and immunoenhancing
PT   agent.
XX
PS   Disclosure; Fig 25; 74pp; English.
XX
CC   The invention relates to a protein which comprises a cytotoxic lymphocyte
CC   maturation factor (CLMF). The protein is useful for stimulating activated
CC   T-cells which involves treating T-cells with the protein. The method
CC   further involves treating the activated T-cells with IL2 or its
CC   biologically active fragment. The protein is useful for stimulating
CC   natural killer cells which involves treating the natural killer cells
CC   with the protein. The protein has immunoenhancing and antitumour effects
CC   when used as single therapeutic agent in vivo. The present sequence is
CC   used in the exemplification of the present invention.

X
C   The invention describes a pharmaceutical composition active in a T cell
C   growth factor assay. The pharmaceutical composition comprises a
C   heterodimeric protein having a molecular weight of 75 kDa as determined
C   by Sodium dodecyl sulfate polyacrylamide gel electrophoresis (SDS-PAGE)
C   under non-reducing conditions, and under reducing conditions, providing a
C   first subunit having a molecular weight of 40 kDa as determined by (SDS-
C   PAGE), and having a fully defined sequence of 306 amino acids as given in
C   the specification, and second subunit having a molecular weight of 35 kDa
C   as determined by (SDS-PAGE). Also described are: a novel cytokine protein
C   called Cytokine lymphocyte maturation factor (CLMF) or interleukin-12 (IL
C   -12) synthesised by mammalian cells, particularly human NC-37 B
C   lymphoblastoid cells, and capable of stimulating T-cell growth; and
C   monoclonal antibodies directed against (CLMF). (I) is useful as a
C   pharmaceutical composition which is active in a T cell growth factor
C   assay. This sequence encodes human cytotoxic lymphocyte maturation factor
C   (CLMF) 40 kDa subunit.

PT  Nucleic acid constructs encoding interleukin-12 fusion proteins useful
PT  for treating leukemia and other cancers.
XX
PS  Example; Fig 9; 73pp; English.
XX
CC  This sequence encodes the human p40 protein sequence. The invention
CC  relates to an isolated nucleic acid construct (I) comprising a region
CC  encoding an interleukin-12 (IL-12) fusion protein (comprising an IL-12
CC  p35 subunit, an IL-12 p40 subunit and a linker peptide (joining the
CC  subunits)) and a region encoding a B7 protein. (I) may be used to produce
CC  IL-12 fusion proteins according to standard recombinant DNA
CC  methodologies. The fusion proteins may be produced either in vitro in a
CC  fermentation culture or in vivo as part of a gene therapy protocol (in
CC  this case (I) is used to transform a patients cells, which then secrete
CC  the functional polypeptide to supplement the patients own production of
CC  IL-12 or to rectify mutations which lead to the expression of inactive
CC  polypeptides). The fusion proteins produced in this way may be used to
CC  treat any disease which responds to IL-12 such as tumours (both solid and
CC  dispersed of the kidney, breast, colon, ovarian and cervical tumours and
CC  melanomas) and in particular, tumours of the blood such as leukaemia.
CC  Alternatively, the polypeptides may be used as antigens in the production
CC  of antibodies to IL-12 and to assay for agonists and antagonists of its
CC  activity. The antibodies and antagonists may be used to inhibit the
CC  activity of IL-12. (I) may also be used diagnostically as a probe which
CC  hybridizes to sequences encoding IL-12 and the antibodies may be used to
CC  detect the presence of IL-12 polypeptides in samples. They may be used
CC  diagnostically to quantitate the expression of the polypeptide by
CC  patients and hence which subjects may be in need of restorative therapy

)S   Claim 1; SEQ ID NO 22; 73pp; English.
:X
:C   The present invention relates to gene expression profiling technology to
:C   quantatively measure the expression profiles of genes selected based on
:C   their role in inflammation and their susceptibility to regulation by
:C   current multiple sclerosis (MS) treatment agents by isolating RNA from
:C   peripheral blood mononuclear cells (PBMC) of patient. The invention is
:C   particularly useful for monitoring a multiple sclerosis patient taking
:C   interferon-beta (IFN-beta) or glatiramer acetate (GA) in order to predict
:C   treatment response. The present sequence is human interleukin-12 40 kDa
:C   (IL-12 p40) subunit gene. This gene is used to illustrate the evaluation
:C   of PBMC responses to in Vitro treatment with IFN-beta or GA agents by
:C   gene expression profiling technology.

PT   Recombinant adenovirus expressing human interleukin-12 and its
PT   preparation and use.
XX
PS   Example 3; Fig 4; 27pp; Chinese.
XX
CC   The present invention describes a recombinant adenovirus and its
CC   preparation and use, as well as medicine composite containing the
CC   recombinant adenovirus. The recombinant adenovirus is used clinically,
CC   has the advantages of low cost, easy use and high efficiency and is
CC   especially suitable for immune treatment of tumour and infectious
CC   diseases caused by bacteria, virus and parasite. The present sequence
CC   represents human interleukin 2 (IL-2) cDNA which encodes the p35 and p40
CC   proteins, which is used in an example from the present invention

T   Hybrid adenoviral gene expression vector for treating cancer, comprises
T   adenovirus liberation system, alpha virus derived vector and specific
T   tumoral promoter.
X
S   Disclosure; SEQ ID NO 13; 149pp; Spanish.
X
C   The invention relates to a novel adenovirus/alphavirus hybrid vector used
C   in the expression of therapeutic genes in tumor cells. The vector
C   comprises: a first chain of adenoviral origin containing a first inverted
C   terminal repeated sequence and a signal sequence for packing the
C   adenovirus; a first non-coding filler sequence; a sequence corresponding
C   to a specific tissue promoter; an alpha virus-derived cDNA chain, the
C   sequence of which is in part complementary to an alpha viral RNA,
C   comprising at least one sequence coding for at least one exogenous gene
C   of interest, a polyadenylation sequence and a second adenoviral ITR
C   sequence. The invention further includes pharmaceutical compositions
C   containing the vector. The novel vector is used to transfer genetic
C   material to a cell, preferably a tumoral cell, especially one which
C   expresses an alfa fetoprotein (AFP). The vector is used to prepare drugs
C   for treating tumors. The vector or pharmaceutical compositions containing
C   them can be used to induce an immune response against foreign antigens.
C   This gene therapy method can be used to treat cancer. This polynucleotide
C   represents a human interleukin-12 DNA sequence used in the construction
C   of a novel vector of the invention.

PT  New polypeptide comprising an antiangiogenesis polypeptide region linked
PT  to a therapeutic protein or a diagnostic protein, useful for diagnosing
PT  or treating angiogenesis-dependent diseases e.g. cancer, lupus or
PT  restenosis.
XX
PS  Disclosure; Page 111-112; 0pp; English.
XX
CC  The present invention relates to a polypeptide comprising an
CC  antiangiogenesis polypeptide region linked to a therapeutic protein or
CC  polypeptide region, or a diagnostic protein or polypeptide region. The
CC  polypeptide comprising an antiangiogenesis polypeptide region or the
CC  nucleic acid encoding the polypeptide comprising the antiangiogenesis
CC  polypeptide is useful for diagnosing or treating angiogenesis-dependent
CC  diseases or cancer. Angiogenesis-dependent diseases include age-related
CC  macular degeneration, artherosclerosis, angiofibroma, neovascular
CC  glaucoma, arteriovenous malformations, nonunion fractures, arthritis,
CC  rheumatoid arthritis, lupus, connective tissue disorders, Osler-Weber
CC  syndrome, psoriasis, corneal graft neovascularisation, pyogenic
CC  granuloma, delayed wound healing, retrolental fibroplasia, diabetic
CC  retinopathy, scleroderma, granulations, haemangioma, trachoma,
CC  haemophilic joints, vascular adhesions, hypertrophic scars, multiple
CC  sclerosis, restenosis or obesity. The present sequence is a coding
CC  sequence shown in the exemplification of the invention

OMMENT cDNA library was prepared and sequenced in Mouse Genome
Encyclopedia Project of Genome Exploration Research Group in Riken
Genomic Sciences Center and Genome Science Laboratory in RIKEN.
Division of Experimental Animal Research in Riken contributed to
prepare mouse tissues.
Tissues were provided by Dr. John Todd (Dept. of Medical Genetics
Wellcome Trust Centre for Molecular Mechanisms in Disease Wellcome
Trust/MRC building Addenbrookes Hospital Cambridge) whose
assistance we gratefully acknowledge.
Please visit our web site for further details.

Computational Analysis of Full-Length Mouse cDNAs Compared with Human Genome Sequences Mamm. Genome. 12, 673-677 (2001)
Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraries for rapid discovery of new genes. Genome Res. 10 (10), 1617-1630 (2000)
RIKEN integrated sequence analysis (RISA) system--384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)
Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)
cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.
Tissues were provided by David A. Hume (Depts. of Biochemistry and Microbiology/Parasitology Institute for Molecular Bioscience University of Queensland Brisbane,Q 4072 Australia) whose assistance we gratefully acknowledge.
Please visit our web site (http://genome.gsc.riken.go.jp) for further details.

Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)
cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.
Tissues were provided by David A. Hume (Depts. of Biochemistry and Microbiology/Parasitology Institute for Molecular Bioscience University of Queensland Brisbane,Q 4072 Australia) whose assistance we gratefully acknowledge.
Please visit our web site (http://genome.gsc.riken.go.jp) for further details.

/dev_stage="Day 12 Corpus Luteum"
/clone_lib="pd12cl"
/note="Vector: T3T7PAC; Funding: A grant from the Monsanto Company to the University of Missouri. Genetic Source: Ovarian tissue (whole ovary, dissected follicles, or corpora lutea) was collected from crossbred pigs (Sus scrofa domestica), frozen in liquid nitrogen shortly after collection, and stored at -80 degrees Celsius until RNA extraction. The tissue from several individual pigs was pooled for the purpose of RNA extraction. The specific tissues collected were fetal whole ovary; neonatal whole ovary; prepubutal whole ovary; 2, 4, 6 and 8 mm growing follicles; Day 0 follicles; Day 5 small antral follicles and corpora lutea; Day 12 corpora lutea and Day 12 follicles. More information regarding the methods can be found at:
http://genome.rnet.missouri.edu/Swine/Methods.html.
Library Construction (Standard Protocol): All procedures discussed in this section have been described in detail elsewhere (Soares et al., 1994; Bonaldo et al., 1996;

Jiang et al., 2001). Total cellular RNA from each sample was isolated by using STAT-60 reagent (Tel-Test, Friendswood, TX) and the poly(A)+ RNA was obtained by two rounds of purification with the Oligotex mRNA isolation kit (Qiagen) according to the manufacturer's instructions. The libraries were constructed essentially as described by the manufacturer's instructions provided with the SuperScript Plasmid System (Invitrogen, cat. no. 18248-013). Briefly, 1mg of poly(A)+ RNA will be annealed at 37 degrees Celsius with 10mg of NotI-tag-dT18 oligonucleotide (GCTGCTCGCGGCCGC-tag-T18) and reverse transcribed at 37 degrees Celsius with SuperScript II (Invitrogen) reverse transcriptase (Jiang et al., 2001). The 'tag' represents a tissue/stage-specific ten-base sequence identifier (http://genome.uiowa.edu/pubsoft/software.html) present in the oligonucleotide used to prime first-strand synthesis. Second strand synthesis was performed with T4 DNA polymerase in the presence of DNA ligase and RNase H. After second strand synthesis, the double-stranded cDNAs was ligated to SalI adapters (Invitrogen-Life Technologies) and digested with NotI. The cDNAs will be size selected by passage through cDNA size fractionation columns (Invitrogen-Life technologies). The cDNAs derived from each developmental stage of a particular tissue were mixed on an equimolar basis and ligated directionally into the NotI and SalI sites of the pSPORT1 vector (Invitrogen). After ligation of the inserts, the plasmids will be electroporated into DH10B bacteria. Preliminary Library Characterization: Randomly chosen clones from each library were analyzed by restriction digestion to determine average insert size (96 clones) and by sequencing (~4 96-well plates) to confirm library quality [e.g. the presence of short polyA+ tails, genomic DNA contamination (must be <1%), ribosomal RNA clones (must be <1%), etc.] and to provide a sequence database representing the predominant clones in each library. The clones were sequenced at the University of Missouri-Columbia DNA Core Facility. Bioinformatics work was performed by GK Springer's bioinformatics group (WG Spollen, JE Ries, A Guillen, AA Khambati, RV Patel, CM Topinka, SB Bhuiyan) in Computer Science and Health Management and Informatics Departments at the University of Missouri-Columbia. Clone Requests: Requests for clones should be made to the Director of the University of Missouri DNA Core facility at: porcine@rnet.missouri.edu. Citations: 1. Bonaldo MF, Lennon G, Soares MB. Normalization and Subtraction: Two approaches to facilitate gene discovery. Genome Res, 1996; 6:791-806. 2.                      /clone_lib="Mouse 10kb plasmid UUGC1M library"
                     /note="Vector: PWD42nv; Purified genomic DNA from M.
                     musculus C57BL/6J (male) was obtained  from the Jackson
                     Laboratory Mouse DNA Resource
                     (http://www.jax.org/resources/documents/dnares/). The DNA
                     was hydrodynamically sheared by repeated passage through a
                     0.005 inch orifice at constant velocity. The sheared DNA
                     was blunt end-repaired with T4 DNA polymerase and T4
                     polynucleotide kinase. Adaptor oligonucleotides were
                     ligated to the blunt ends in high  molar excess. The
                     adaptored DNA was purified and size-selected for a 9.5 to
                     10.5 kb range using preparative agarose gel
                     electrophoresis. Vector DNA was prepared from a derivative
                     of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
                     inducible derivative of plasmid R1. The vector was ligated
                     with adaptors complementary to the insert adaptors and
                     purified. The sheared, adaptored mouse DNA was annealed to
                     adaptored vector DNA, and transformed into
                     chemically-competent E. coli XL10-Gold (Stratagene) cells
                     and selected for ampicillin resistance."

                    /note="Vector: PWD42nv; Purified genomic DNA from M.
                    musculus C57BL/6J (male) was obtained  from the Jackson
                    Laboratory Mouse DNA Resource
                    (http://www.jax.org/resources/documents/dnares/). The DNA
                    was hydrodynamically sheared by repeated passage through a
                    0.005 inch orifice at constant velocity. The sheared DNA
                    was blunt end-repaired with T4 DNA polymerase and T4
                    polynucleotide kinase. Adaptor oligonucleotides were
                    ligated to the blunt ends in high  molar excess. The
                    adaptored DNA was purified and size-selected for a 9.5 to
                    10.5 kb range using preparative agarose gel
                    electrophoresis. Vector DNA was prepared from a derivative
                    of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
                    inducible derivative of plasmid R1. The vector was ligated
                    with adaptors complementary to the insert adaptors and
                    purified. The sheared, adaptored mouse DNA was annealed to
                    adaptored vector DNA, and transformed into
                    chemically-competent E. coli XL10-Gold (Stratagene) cells
                    and selected for ampicillin resistance."

 TITLE     T-DNA integration into the Arabidopsis genome depends on sequences
           of pre-insertion sites
 JOURNAL   EMBO Rep. 3 (12), 1152-1157 (2002)
  PUBMED   12446565
EFERENCE   2  (bases 1 to 115)
 AUTHORS   Balzergue,S.
 TITLE     Direct Submission
 JOURNAL   Submitted (21-NOV-2002) Balzergue S., UMRGV, INRA/CNRS, 2 rue
           Gaston Cremieux, 91057 Evry cedex, FRANCE
OMMENT     PCR was performed on DNA from transformants of Arabidopsis thaliana
           plants from INRA (Versailles). The DNA fragment(s) resulting from
           the PCR were directly sequenced from the left or the right border
           to determine the genomic sequence flanking the insertion. T-DNA
           derived sequences were removed. Information to order the
           corresponding mutant line and a link to a database providing a
           graphical display of the insertion site are available at
           http://dbsgap.versailles.inra.fr/publiclines/. This sequence has
           been generated in the framework of the French plant genomics
           program 'Genoplante' (http://www.genoplante.com and
           http://genoplante-info.infobiogen.fr).

The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is TGATCACGCT.

                    /clone="IMAGE:5836100"
                    /tissue_type="Chondrosarcoma"
                    /dev_stage="Adult"
                    /lab_host="DH10B (Life Technologies)"
                    /clone_lib="NCI_CGAP_ED0"
                    /note="Organ: Left Pubic Bone; Vector: pT7T3-Pac
                    (Pharmacia) with a modified polylinker; Site_1: EcoR I;
                    Site_2: Not I; NCI_CGAP_ED0 is a cDNA library containing
                    the following tissue(s): Chondrosarcoma cell line CS5. The
                    library was constructed according to Bonaldo, Lennon and
                    Soares, Genome Research, 6:791-806, 1996. First strand
                    cDNA synthesis was primed with an oligo-dT primer
                    containing a Not I site. Double stranded cDNA was ligated
                    to an EcoR I adaptor, digested with Not I, and cloned
                    directionally into pT7T3-Pac vector. The oligonucleotide
                    used to prime the synthesis of first-strand cDNA contains
                    a library tag sequence that is located between the Not I
                    site and the (dT)18 tail. The sequence tag for this
                    library is GCTCAAGGCT.
                    TAG_TISSUE=chondrosarcoma
                    TAG_LIB=UI-H-ED0
                    TAG_SEQ=CGTCAAGGCT"

                    (Pharmacia) with a modified polylinker; Site_1: EcoR I;
                    Site_2: Not I; NCI_CGAP_FL1 is a normalized cDNA library
                    derived from a pool of mRNA obtained from 4 cell lines
                    from grade III chondrosarcoma tissues. The library was
                    constructed according to Bonaldo, Lennon and Soares,
                    Genome Research, 6:791-806, 1996. First strand cDNA
                    synthesis was primed with an oligo-dT primer containing a
                    Not I site.  Double stranded cDNA was ligated to an EcoR I
                    adaptor, digested with Not I, and cloned directionally
                    into pT7T3-Pac vector. The oligonucleotide used to prime
                    the synthesis of first-strand cDNA contains a library tag
                    sequence that is located between the Not I site and the
                    (dT)18 tail. The sequence tag for this library is
                    GAGGTCGGTG. The cell lines were provided by Dr. James
                    Martin from the University of Iowa.
                    TAG_TISSUE=Human Chondrosarcoma Grade 3 cell line mix
                    TAG_LIB=UI-H-FL1
                    TAG_SEQ=GAGGTCGGTG"

```

library was constructed from 1 million independent clones. cDNA synthesis was initiated using an oligo(dT) primer, using methylated C in the first strand synthesis reaction. Following this first strand reaction, double-stranded cDNA was blunted, ligated to NotI adapters, digested with EcoRI, size-selected, and cloned into the NotI and EcoRI compatible sites of a custom modified MCS of the pBluescript (KS+) vector. The library was normalized in 2 rounds using conditions adapted from Soares et al., PNAS (1994) 91: 9228-9232 and Bonaldo et al., Genome Research 6 (1996): 791, except that a significantly longer reannealing hybridization was used."

                     extraembryonic tissues (bcaz/BE03)"
                     /note="Vector: pGEMZf11; Funding for EST sequencing was
                     provided by funds dedicated to J.P.RENARD (BDR, Inra).
                     Funding for construction and subtraction of the cDNA
                     library was provided by USDA ARS contract No 58-1275-2-020
                     to H. A. Lewin The cDNA library was constructed,
                     normalized and subtracted by Dr. A. Hernandez (W.M. Keck
                     Center, University of Illinois Urbana-Champaign) and S.
                     Degrelle (BDR, Inra) as described in Bonaldo et al.(1996),
                     Genome Research 6, 791-806. BE03 library is a normalized
                     library of embryonic tissues subtracted with 7800 known
                     EST sequences. The double-stranded cDNA was size selected
                     (>450 bp), adaptored with EcoRI adaptors at both ends and
                     digested with NotI. The cDNA was then directionally cloned
                     into EcoRI-NotI digested pGEM11Zf(+) phagemid vector.
                     Insert size was between 450-2200 bp. Tagged oligo-dT was
                     used to identify the origin of the ESTs where possible.
                     (A18)TGCGT = extraembryonic tissue; (A18)TCGGT = 36-day
                     oldfetus; (A18)TGCGA = 64-day old fetus (organs);
                     (A18)TCGGA = 64-day old fetus (body)"

LENGTH: 1870
TYPE: DNA
ORGANISM: Artificial Sequence
FEATURE:
NAME/KEY: gene
LOCATION: (1)..(1870)
OTHER INFORMATION: Interleukin-12 (IL-12, p40-subunit); Oligo DNA Dumbbell
FEATURE:
NAME/KEY: misc_binding
LOCATION: (1)..(2)
OTHER INFORMATION: intramolecular binding site; the T-nucleotides at position 1 to
OTHER INFORMATION: 2 can be modified with amino or caroxy features
FEATURE:
NAME/KEY: misc_binding
LOCATION: (1869)..(1870)
OTHER INFORMATION: intramolecular binding site; the T-nucleotides at position 1869
OTHER INFORMATION: to 1870 can be modified with amino or caroxy features
FEATURE:
OTHER INFORMATION: Description of Artificial Sequence: Strandness: both; nucleic
OTHER INFORMATION: acid (linear), hypothetical: No. US20030054392A1 anti-sense: No
